

Cx360

The Most Advanced EHR for IDD and Autism Service Providers

Core's Cx360 EHR is designed to meet the specific challenges of those providing services for individuals with intellectual or developmental disabilities (IDD) and autism. Discover how our technology brings new levels of connectedness and productivity to your work, so you can best meet the needs of the communities you serve.

Achieve the Best Outcomes

Total Care Continuity

The right technology helps you assess needs, recognize progress, and set meaningful goals. Cx360 enables team collaboration and whole-person care like never before.

Documentation support

Life plans and service plans can often be long and complex. Automated assists make it easier to record notes, complete assessments, set meaningful goals, and track progress. More complete and structured documentation, outcomes tracking, and Cx360's AI and analytics come together to give you new insights into the quality and cost of the services you provide.

Complete interoperability

Recognize past and current service needs within the broader context of care. Cx360 makes it easy to securely exchange progress notes and care plans with primary care physicians, care coordinators, clinicians, and others across the IDT (interdisciplinary) care team using HL-7 standards.

Built-in telehealth and mobile access

Cx360's embedded telehealth enables you to securely host appointments for individuals served wherever they are. Need to provide services off-site? Cx360 is cloud-based and accessible to your staff by mobile, so it's easy to record notes and then sync up whenever WIFI is present.

Secure client and family portal

Easily exchange communications and forms with individuals and their family members.

Achieve More

Remove barriers so your team can work more efficiently and focus on what matters most.

Help your team perform at their best with automated productivity-builders and best-practice guidance and support.

✓ Assessment-based planning and automated accountability drivers

With Cx360, staff can conduct a comprehensive assessment to identify an individual's needs. Each need then translates to a valued outcome on a person-centered life plan or service plan. Care managers can then assign tasks to various members of the care team to achieve these outcomes. The result? Meaningful goals, an actionable plan, and improved quality outcomes.

✓ Built-in task triggering

Leave no task behind with clinical process tracking and automated task scheduling. As your team completes one task, the next task in the process is immediately generated and routed for completion. As a result, your team can complete assessments, build service plans, fulfill approvals, and verify task completion with new levels of ease and focus.

✓ Expert Support

Our trainers, support team, and product innovators understand your unique needs, challenges, and goals. We're fully committed to helping you advance care for the communities you serve. With decades of experience and a clear vision for how technology and data will support your organization in improving whole-person care, Core is proud to be your partner first and vendor second.

✓ Preconfigured templates and forms

Save valuable time and adhere to evidence-based best practices by incorporating service-specific and role-specific templates, workflows, and forms into your day-to-day operations. Your team can also use our built in Forms Designer Tool to build and modify ideal models for IDD or autism service delivery with ease and efficiency.

✓ Configurable alerts and notifications

Always have an eye on the unexpected. With easy-to-set business rules, your team can create alerts and notifications around critical events, such as when immunizations are due or when notice of an ED visit is shared.

✓ Automated billing

Protect and grow your revenue as payment becomes more complex and value-based. Accurately capture and document each service and the outcomes achieved. Directly link your documentation to claims submissions and automatically generate bills.

✓ Deeper insights

Ready-to-go dashboards and Cx360's powerful data capture and analytics help you set, monitor—and achieve—the right cost and quality targets across your organization. Recognize trends, identify improvement opportunities, and take your performance to new levels.

Discover how Cx360 can improve your workflow!

Core's EHR solutions for complex care communities have been trusted by executives, program directors, and end-users alike for over twenty years.
