

Cx360 GO

Ambient Documentation for Behavioral Health Made Simple

Core's Cx360 GO is a user-friendly and cost-effective ambient documentation solution designed for providers of mental health, substance use disorder (SUD), and intellectual and developmental disabilities (IDD) services. GO automatically captures conversations and converts them into case notes in seconds, enabling clinicians to prioritize care over manual documentation.

Client Note

Notes Transcript Symptoms Charts

Plan:

The patient should continue to work on managing their anxiety through relaxation techniques and therapy. Additionally, they are encouraged to practice mindfulness exercises daily, engage in regular physical activity to support overall well-being, and maintain a consistent sleep routine. Follow-up in four weeks to assess progress and address any ongoing concerns. Consider adjusting the treatment plan if symptoms persist or worsen.

Do you find this note relevant to the conversation?

transparency – your client data is not used

Start Fast

Once you've downloaded Cx360 GO, you can begin using it immediately. There's no training required. The app seamlessly integrates with your EHR or can be used as a standalone solution.

Strengthen Compliance

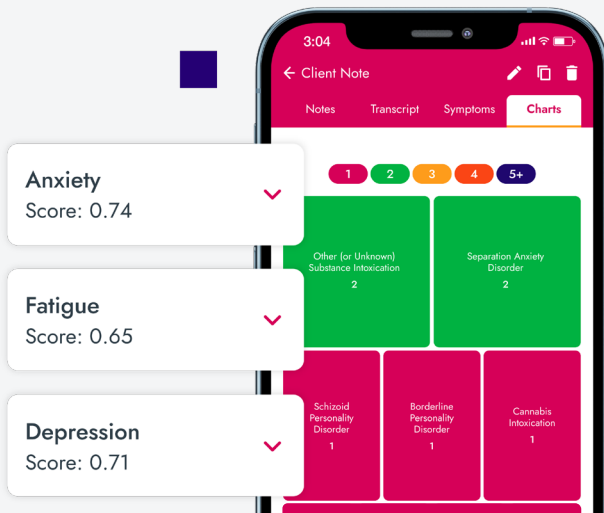

Tailored specifically for behavioral health, Cx360 GO minimizes the risk of incomplete or inaccurate records, enhancing compliance and better ensuring optimal reimbursement.

Improve Productivity

Save significant time spent on clinical documentation, freeing providers to support more clients while decreasing burnout associated with administrative tasks.

Symptom Tracker

Cx360 GO includes Core’s AI-powered Symptom Tracker (beta). Run therapy notes through the tool to identify behavioral health symptoms and receive guidance on diagnoses. Symptom Tracker measures the intensity of symptoms, enables organizations to track symptom changes, and moves toward measurement-based care.

Why Cx360 GO?

The Purpose-Built Behavioral Health Ambient Listening Solution

Behavioral Health-Focused Multilingual App

Developed by behavioral health and IDD experts at Core Solutions, users can be confident that the multilingual technology will have what they need to streamline documentation, boost clinician productivity, improve quality of care and outcomes, and maintain compliance.

Enhanced Clinician and Client Satisfaction

Cx360 GO captures conversations naturally and structures them into usable documentation without requiring manual input. Clinicians are empowered to spend more time engaged with clients, leading to increases in clinician and client satisfaction.

Customer Data Protected, Ensuring Privacy

Core does not use customer data to train its AI models. Instead, we invested in experienced clinicians to build and improve our note-generation process.

Prioritizing Transparency and Responsible AI

Core is fully transparent on how its LLM was created and is maintained. The company’s commitment to the responsible use of artificial intelligence includes its willingness to provide information on important considerations like limitations and potential bias of data.
